10 Best Twitter Alternatives Where Free Speech Is Respected

We Care About Your Privacy

We can enhance your experience on this site by personalizing the content and ads you view if you agree to let us use web tracking technologies such as cookies that help us and our partners to understand how you interact with the site. This information consists of, for example, unique web browsing history, precise geolocation and unique identifiers. You can choose what technologies you allow on the 'Manage Preferences' button located on every page, where you can change your settings and withdraw consent any time. Privacy Policy

We and our partners process data as follows:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised ads and content, ad and content measurement, audience insights and product development.

SHARE

What went wrong

- Era of information
- With free information, comes noise
- We became desensitized

How to make Noise

- Including information has negligible liability
- No filtering OR centralized filtering

What could go right?

Decentralized Curation

- Inclusion needs a stake
- Anyone can filter

Stake Curate

Public good curation tool

- Anyone can create “Lists”
  - Lists have rules and settings
- Anyone can submit “Items”
  - Contains properties, under a List

Stake Curate

Public good curation tool

- Anyone can create “Lists”
  - Lists have rules and settings
- Anyone can submit “Items”
  - Contains properties, under a List

5 ad-free blogs
Stake and Submit
Alice stakes 100 DAI. Items require 100 DAI.
100 DAI are enough to collateralize all blogs at once.

5 ad-free blogs

Stake and Submit

Alice stakes 100 DAI. Items require 100 DAI.

100 DAI are enough to collateralize all blogs at once.

24h

Bob wants to remove a blog.
Bob **creates a dispute** and puts **50 DAI as bond**.

Bob's 50 DAI

100 DAI are enough to collateralize all blogs at once.

24h

Bob wants to remove a blog.
Bob **creates a dispute** and puts **50 DAI as bond**.

Bob's 50 DAI bond is paid to Alice

100 DAI are locked from Alice's stake.
She now has 0 free DAI.

Alice's 4 remaining blogs are not collateralized, so they are not included anymore.

She stakes 100 extra DAI to get her other 4 blogs listed back as soon as possible.

Bob's 50 DAI bond is paid to Alice

100 DAI are locked from Alice's stake.
She now has 0 free DAI.

Alice's 4 remaining blogs are not collateralized, so they are not included anymore.

She stakes 100 extra DAI to get her other 4 blogs listed back as soon as possible.

Jurors Review Evidence

Alice Wins!

Her 100 DAI are unlocked.

Stake Curate details

- Lists can be edited
- Items can be edited

Stake Curate details

- Item data can be stored off-chain (IPFS)
- Arbitrary data can be stored on-chain

Stake Curate details

- Stakes for ERC20 tokens can collateralize all items in compatible lists.
- **Network effect**: if Alice is already an user of Stake Curate, curating new lists has less friction.

Stake Curate details

- *Badge* or *Module* system
- In the end, it works like regular Lists, but allows for modularity, asserting traits or appending additional information.

Stake Curate

Infrastructure

- Smart Contract
- Subgraph
- Library for fetching
- Default Frontend

Is this really useful?

Samson Mow @Excellion · Aug 23

The point is it can easily be the same hash function. Any shitcoin that hardforks regularly can just use the same hash function as Bitcoin. Take advantage of a huge pool of hardware from many vendors & use more energy efficient hashing. But they won't. Because they can't compete.

Stake Wiki

- General purpose, crypto native Wiki

Why:

- Wikipedia brand is held by a wasteful org (Wikimedia)

- “Librarians” (mods) control articles

🧪 Scientific Papers 🧪

- Fight against contemporary science faults:
  - P-hacking
  - Bad citations
  - Funding bias
  - Quantity over quality

- Believe your paper is science? Put skin in the game.

Maps Clone

Didn’t some make this already?

- List of Geolocations
- Use the module system to append info:
  - Business? Name?
  - Contact?
  - Schedule?

✅ “Good” Policies ✅

- Writing good policies is difficult
- “Good” as in “no edge cases” and “fulfills spirit”

🏴‍☠️ Pirate Bay 🏴‍☠️

- A registry of torrent magnets that lead to content
- Exclusively for educational purposes

💻 npm software 💻

- List libraries according to versions
- Put “no vulnerabilities” badges. If a dependency is vulnerable, then you’re vulnerable.

⏱️ Speedruns ⏱️

- Means “beat game fast”
- Usually handled in speedrun.com, but centralized
- Distribute rewards on-chain?

Always has been
Wait, it's all **curation** ???

Not finished yet

Check out current progress.
